O sistema OR foi concebido para aproveitamento de espaço ao ar livre, alinhado com as novas tendências de arquitectura minimalista. Apresenta um design com linhas direitas, numa combinação de várias tipologias, sublime e elegante com a ocultação de qualquer sistema de fixação.

A cobertura integra um conjunto de lâminas orientáveis em alumínio, permitindo criar sombra mediante a posição do sol. O fecho total das lâminas protegem da chuva e permite a orientação das águas pluviais para os canais de evacuação pré-concebidos.

The OR system is designed to take full use of outdoor space, in harmony with the new trends in minimalist architecture. It presents a design with straight lines, in a combination of various typologies, sublime and elegant with the concealment of any fastening system.

The roof integrates a set of aluminium orientable louvers, which allow shadow to be created depending on the sun's position. The total closure of the louvers protects from rain and allows rainwater to be guided into the pre-conceived drainage channels.

Le système OR est conçu pour bénéficier de l'espace extérieur, en accord avec les nouvelles tendances de l'architecture minimaliste. Il présente un design aux lignes droites, dans une combinaison de différents typologies, sublime et élégant avec la dissimulation de tout système de fixation.

La toiture intègre un jeu de lames orientables en aluminium, permettant de créer de l'ombre en fonction de la position du soleil. La fermeture totale des lames protège de la pluie et permet de guider l'eau de pluie dans les canaux d'évacuation prédéfinis.

All measurements are considered in mm, except those duly identified | Toutes les mesures sont considérées en mm saufs celles qui sont dûment identifiées

CARACTERÍSTICAS PRINCIPAIS**ESSENTIAL FEATURES****CARACTÉRISTIQUES PRINCIPALES**

A pérgola bioclimática é um sistema autoportante em alumínio que permite a aplicação de lâminas motorizadas orientáveis.

É composta por um aro fixo principal, cortado a 45°, que integra em segurança todos os mecanismos do sistema de movimentação das lâminas e pelo conjunto de lâminas móveis.

A câmara onde se encontram os mecanismos é acessível para a manutenção do sistema.

A geometria das lâminas permite o encaixe perfeito entre elas, intercalando uma pelúcia que salvaguarda o encosto metálico. Estas contêm ainda um canal de recolha de água, que, de forma segura, a conduz para as caleiras laterais e torna o sistema impermeável.

A estrutura das colunas é versátil, uma vez que permite a instalação de descargas de água para o exterior ou para uma conduta própria no pavimento.

The bioclimatic pergola is a self-supporting aluminium system, which allows application of adjustable motorised louvres.

It consists of a main fixed frame, cut at 45°, which safely integrates all the mechanisms of the blade movement system and the set of mobile louvres.

The chamber containing the mechanisms is accessible for system maintenance.

The geometry of the louvres allows a perfect fit between them, interspersed with a pile seal that safeguards the metal backrest.

These also contain a water collector channel, which safely conducts the water to the side gutters and ensures the waterproofness of the system.

The structure of the columns is versatile, since it allows the installation of water discharges to the exterior or to a specific duct in the floor.

La pergola bioclimatique est un système autoportant en aluminium qui permet l'application de lames motorisées réglables.

Elle se compose d'un cadre principal fixe, coupé à 45°, qui intègre en toute sécurité tous les mécanismes du système de mouvement des lames et l'ensemble des lames mobiles.

La chambre contenant les mécanismes est accessible pour l'entretien du système.

La géométrie des lames permet un ajustement parfait entre elles, entrecoupées d'une joint brosse qui protège le dos métallique.

Celles-ci contiennent également un canal de drainage d'eau, qui conduit en toute sécurité l'eau vers les gouttières latérales et rend le système imperméable.

La structure des colonnes est polyvalente, puisqu'elle permet d'installer des évacuations d'eau vers l'extérieur ou vers un tuyau spécifique dans le sol.

ACESSÓRIOS E FERRAMENTAS
ACCESSORIES AND TOOLS
ACCESSOIRES ET OUTILS

O mecanismo e a motorização das lâminas orientáveis são fornecidos pela empresa SOSOARES e permitem uma movimentação das lâminas até 105°.

Todos os artigos são fornecidos em aço inox para garantir durabilidade.

As pelúcias utilizadas são fabricadas em polipropileno, as quais são produzidas com apertado controlo de qualidade, garantido assim a longevidade do produto.

Todos os parafusos e peças de ancoragem são em aço inox e/ou aço carbono galvanizado.

Para um bom acabamento do produto final, é necessário ter em conta algum rigor de corte e maquinação dos perfis.

O rigor das esquadrias, depende de um corte único, com os perfis sempre bem posicionados e pressionados contra a bancada da serra, evitando assim qualquer tendência de desvio.

Os cortes e furações nos perfis deverão ser tratados e limpos de qualquer rebarba ou sujidade e sempre que possível com produtos anti-corrosivos.

As peças de ancoragem deverão ser fixas ao pavimento com elementos de fixação adequados ao tipo de construção aplicado.

O contacto entre os acessórios metálicos e os perfis de alumínio deverão ser intercalados com tratamentos e/ ou telas que evitem as reações químicas.

The mechanism and motorization of the adjustable louvres are supplied by the company SOSOARES and allow up to 105° movement of the louvres.

All items are supplied in stainless steel to ensure durability.

The pile seals used are made of polypropylene, which are produced under strict quality control, thus guaranteeing the longevity of the product.

All screws and anchoring parts are made of stainless steel and/or galvanised carbon steel.

For a good finish of the final product, it is necessary to take into account some rigour in the cutting and machining of the profiles.

The accuracy of the frames depends on a single cut, with the profiles always well positioned and pressed against the saw bench, thus avoiding any tendency to deviate.

The cuts and holes in the profiles should be treated and cleaned of any burrs and dirt, and whenever possible with anti-corrosion products.

The anchorage pieces should be fixed to the floor with fixing elements appropriate for the type of construction applied.

The contact between the metallic accessories and the aluminium profiles should be interposed with treatments and/or screens that prevent chemical reactions.

Le mécanisme et la motorisation des lames réglables sont fournis par la société SOSOARES et permettent un mouvement des lames jusqu'à 105°.

Tous les éléments sont fournis en acier inoxydable pour garantir leur durabilité.

Les joint brosses utilisés sont en polypropylène, fabriqués sous un strict contrôle de qualité, ce qui garantit la longévité du produit.

Toutes les vis et pièces d'ancrage sont en acier inoxydable et/ou en acier au carbone galvanisé.

Pour une bonne finition du produit final, il est nécessaire de tenir compte d'une certaine rigueur dans la découpe et l'usinage des profilés.

La précision des cadres dépend d'une coupe unique, les profilés étant toujours bien positionnés et pressés contre le banc de scie, ce qui évite toute tendance à la déviation.

Les coupes et les trous dans les profilés doivent être traités et nettoyés de toute bavure et saleté et, dans la mesure du possible, avec des produits anticorrosion.

Les pièces d'ancrage doivent être fixées au sol à l'aide d'éléments de fixation adaptés au type de construction utilisé.

Le contact entre les accessoires métalliques et les profilés en aluminium doit être protégé par des traitements et/ou des écrans qui empêchent les réactions chimiques.

Este tipo de ligação a 45°, acontece nas tipologias com lados do aro fixos à parede. Nas tipologias com aros de pérgola unidos, teremos dois cantos contíguos, em que um leva a fixação standard de ligação à coluna e a outra terá esta furação

This type of 45° connection occurs in typologies with the sides of the frame fixed to the wall. In the typologies with the pergola frames joined together, there will be two adjoining corners, one with the standard fixing for connection to the column and the other with this drilling

Ce type d'assemblage à 45° se produit dans les modèles dont les côtés de la structure sont fixés au mur. Dans les modèles où les cadres de la pergola sont joints, il y aura deux angles adjacents, l'un avec la fixation standard pour la connexion à la colonne et l'autre avec ce trou

MAQUINAÇÃO PARA A ACOMODAÇÃO DAS PORCAS DA UNIÃO DO ARO

MACHINING TO ACCOMMODATE THE NUTS OF THE FRAME UNION

USINAGE POUR ACCUEILLIR LES ÉCROUS DE LA JONCTION DES CADRES

Esta maquinação é opcional. Permite uma melhor vedação da furação que deverá ser realizada quando se fizer a união do perfis. Permite também, aplicar as Presilhas de fixação do OR 33, no caso de não terem sido introduzidas no aro, antes do fecho deste.

This machining is optional. It allows better sealing of the hole that must be drilled when joining the profiles. It also makes it possible to apply the OR 33 Clamps, if they have not been inserted into the frame, before closing it.

Cet usinage est facultatif. Il permet une meilleure étanchéité du trou qui doit être percé lors de l'assemblage des profilés. Il permet également d'appliquer les Clameaux de fixation OR 33, s'ils n'ont pas été insérés dans le cadre, avant de le fermer.

FIXATION DES LAMES DE FINITION OR 25 SUR LE PROFILÉ OR 26

PEÇAS PARA FIXAÇÃO À PAREDE

WALL FIXING PARTS

PIÈCES POUR FIXATION MURALE

Nas soluções onde apenas um dos lados do aro é fixo à parede, o perfil de ancoragem OR13 deverá ser contínuo. Nas soluções onde vários lados são fixos à parede, deve prevalecer a aplicação das peças contínuas nos comprimentos da pérgola, onde esta é mais sujeita ao peso das lâminas.

As peças do aro (conjunto OR01 + OR02) que são aplicadas em primeiro não precisam de ser emalhetadas. As restantes peças do aro, que não poderão ser aplicadas de forma deslizante, o perfil do aro deverá ser malhetado no gancho inferior para permitir a junção das peças cortadas a 45°.

O perfil OR 13 que fixa à parede deverá ser fixo com dispositivos compatíveis com a solução construtiva da obra, não dispensando de uma consulta aos fornecedores especializados.

Fazer uma pré-fixação das peças OR 13 e proceder depois a uma fixação definitiva do aro ao perfil OR 13. Essa fixação definitiva deverá ser feita de forma a não colidir com outros componentes que precisam de ser aplicados posteriormente.

In solutions where only one side of the frame is fixed to the wall, the anchoring profile OR 13 should be continuous. In solutions where several sides are fixed to the wall, the application of continuous pieces should prevail in the pergola lengths, where it is more subject to the weight of the louvers.

The frame parts (set OR01 + OR02) that are applied first do not need to be milled. The remaining frame pieces, which cannot be fitted in a sliding manner, must be trimmed on the lower hook to allow the join of the pieces cut at 45°.

The OR13 profile must be fixed to the wall with devices that are compatible with the construction solution, not exempting a consultation with specialised suppliers.

Fix the OR 13 parts beforehand and then proceed to fix the frame to the OR 13 profile definitively. This definitive fixing must be done in such a way that it does not collide with other components that need to be applied later.

Dans les solutions où un seul côté du cadre est fixé au mur, le profilé d'ancrage OR 13 doit être continu. Dans les solutions où plusieurs côtés sont fixés au mur, l'application de pièces continues doit prévaloir dans les longueurs de la pergola, où elle est plus soumise au poids des lames.

Les pièces du cadre (set de OR01 + OR02) qui sont appliquées en premier n'ont pas besoin d'être rainurées. Pour les autres pièces du cadre, qui ne peuvent pas être appliquées de manière glissante, le profilé du cadre doit être entaillé sur le crochet inférieur pour permettre la jonction des pièces coupées à 45°.

Le profilé OR13 doit être fixé au mur à l'aide de dispositifs compatibles avec la solution de construction de l'ouvrage, sans qu'il soit nécessaire de consulter des fournisseurs spécialisés.

Fixer préalablement les pièces OR 13 et procéder ensuite à la fixation définitive du cadre sur le profilé OR 13. Cette fixation définitive doit être effectuée de manière à éviter les collisions avec d'autres composants qui devront être appliqués ultérieurement.

VI

MONTAGENS
ASSEMBLIES
ASSEMBLAGES

GENERALIDADES PARA A MONTAGEM:**ASSEMBLY CONSIDERATIONS | CONSIDÉRATIONS RELATIVES À L'ASSEMBLAGE**

A qualidade final da obra está diretamente ligada ao rigor de corte, maquinação e furação de todos os componentes, de forma a que a ligação entre os elementos não tenha desvios nem folgas inestéticas.

O sistema OR é adequado para formar estruturas autoportantes ou fixas em estruturas pré existentes, desde que o sistema de sombreamento aplicado esteja dentro das especificidades do dimensionamento.

Grande parte dos perfis do sistema estão fora da dimensão standard da caixilharia comum o que obriga a cuidados mais específicos nas operações de corte e maquinação. É de extrema importância a fixação correta nas máquinas de corte onde devem ser sempre bem pressionados contra a serra, sem folgas ou desvios. Sempre que houver necessidade, é aconselhável colocar calços e apoios nos perfis para melhorar o posicionamento correto na máquina e evitar vibrações.

As furações, fresagens e cortes dos perfis devem ser rebarbados, limpos, desengordurados e tratados com um produto anti-corrosão. As ligações entre perfis deverão ser seladas com vedante neutro, para promover alguma estanquidade entre as câmaras dos mesmos.

Os perfis de alumínio tendem a sofrer um fenómeno de contração e expansão mediante o diferencial de temperaturas a que uma obra está sujeita. Esta consideração terá de ser tida em conta na hora de cortar os perfis consoante a temperatura em que eles se encontram. Assim, evitam-se folgas exageradas no pico das temperaturas mais baixas ou o material deformado no pico das temperaturas mais elevadas. Estes efeitos podem ser minimizados na escolha de cores e tons claros.

O posicionamento das sapatas da pérgola deverá ser feita em obra, numa superfície limpa, devidamente alinhado nos três eixos. O piso deverá conter um roço prévio para a canalização das águas pluviais de forma a conetar a água proveniente do interior das colunas.

O tipo de fixação a fazer entre as sapatas da pérgola e o piso e entre o aro e a fixação à parede deverá estar de acordo com o material existente, e não dispensa de uma consulta aos fornecedores especializados.

The final quality of the work is directly related to the accuracy of the cutting, machining and drilling of all the components, so that the connection between the elements has no deviations or unsightly gaps.

The OR system is suitable for forming self-supporting or fixed structures on existing structures, as long as the shading system applied is within the specific dimensioning requirements.

A large part of the system's profiles are outside the standard dimensions of common frames, which requires more specific care in cutting and machining operations. It is extremely important that they are correctly fixed in the cutting machines, where they should always be well pressed against the saw, without gaps or deviations. Whenever necessary, it is advisable to place shims and supports on the profiles to improve correct positioning in the machine and avoid vibrations.

The drilling, milling and cutting of the profiles should be deburred, cleaned, degreased and treated with an anti-corrosion product. The connections between profiles should be sealed with a neutral sealant to provide some degree of watertightness between their chambers.

Aluminium profiles tend to undergo a phenomenon of contraction and expansion depending on the temperature differential to which a building site is subjected. This consideration must be taken into account when cutting the profiles according to the temperature they are at. In this way, exaggerated gaps at the lowest temperature peak or deformed material at the highest temperature peak are avoided. These effects can be minimised by choosing light colours and shades.

The pergola anchorage should be positioned on site, on a clean surface, properly aligned on the three axes. The floor must have a preliminary groove for channelling rainwater so as to connect the drainage coming from the inside of the columns.

The fixing to be made between the pergola anchors and the floor and between the frame and the wall fixing must be in accordance with the existing material, and does not dispense with consulting specialised suppliers.

La qualité finale de l'ouvrage est directement liée à la précision de la coupe, de l'usinage et du perçage de tous les composants, de manière à ce que la connexion entre les éléments ne présente aucune déviation ou lacune inesthétique.

Le système OR est adapté à la réalisation de structures autoportantes ou fixes sur des structures existantes, à condition que le système d'ombrage appliqué respecte les spécificités de dimensionnement.

Une grande partie des profilés du système sont en dehors des dimensions standard des cadres courants, ce qui nécessite un soin plus spécifique dans les opérations de coupe et d'usinage. Il est extrêmement important qu'ils soient correctement fixés dans les machines de coupe, où ils doivent toujours être bien appuyés contre la scie, sans écarts ni déviations. Si nécessaire, il est conseillé de placer des cales et des supports sur les profilés afin d'améliorer le positionnement correct dans la machine et d'éviter les vibrations.

Le perçage, le fraisage et la découpe des profilés doivent être ébarbés, nettoyés, dégraissés et traités avec un produit anticorrosion. Les raccords entre les profilés doivent être scellés à l'aide d'un produit d'étanchéité neutre afin d'assurer un certain degré d'étanchéité entre leurs chambres.

Les profilés en aluminium ont tendance à subir un phénomène de contraction et de dilatation en fonction du différentiel de température auquel est soumis un chantier. Cette considération doit être prise en compte lors de la découpe des profilés en fonction de la température à laquelle ils se trouvent. On évite ainsi les écarts exagérés au niveau du pic de température le plus bas ou les déformations du matériau au niveau du pic de température le plus élevé. Ces effets peuvent être minimisés en choisissant des couleurs et des teintes claires.

Les ancrages de la pergola doivent être positionnés sur le terrain, sur une surface propre, correctement alignés sur les trois axes. Le sol doit comporter un trou préliminaire pour la canalisation de l'eau de pluie afin de raccorder le drainage provenant de l'intérieur des colonnes.

Le type de fixation à réaliser entre les ancrages de la pergola et le sol et entre le cadre et la fixation au mur doit être en accord avec le matériel existant, ce qui ne dispense pas de consulter des fournisseurs spécialisés.

MONTAGEM DO ARO PRINCIPAL OR 01 + OR 02

MAIN FRAME ASSEMBLY OR 01 + OR 02

ASSAMBLAGE DU CADRE PRINCIPALE OR 01 + OR 02

Depois de se efectuar todos os cortes, malhetes e furações, encaixar o perfil OR 01 e OR 02 e proceder à fixação entre os elementos. Ter atenção na solução da pérgola apoiada na parede, e acertar as peças com as furações corretas: as que correspondem aos cantos com colunas e as que correspondem aos cantos adjacentes à parede.

After all the cuts, machinings and drillings have been made, fit the OR 01 and OR 02 profiles and proceed to fix them together. Pay attention to the solution of the pergola supported on the wall, and fit the pieces with the correct holes: those that correspond to the corners with columns and those that correspond to the adjacent corners to the wall.

Après avoir effectué toutes les coupes, l'usinages et les perçages, monter les profilés OR 01 et OR 02 et procéder à leur fixation. Faites attention à la solution de la pergola appuyée sur le mur et monter les pièces avec les trous corrects: ceux qui correspondent aux angles avec les colonnes et ceux qui correspondent aux angles adjacents au mur.

Ligação do aro a 45° com a coluna

Connection of the 45° frame with the column

Connexion du cadre à 45° avec la colonne

Ligação do aro a 45° com a parede

Connection of the 45° frame to the wall

Connexion du cadre à 45° au mur

Na ligação a 45° com a parede, o perfil OR02 não deverá ter furações na zona inferior.

When connecting the 45° frame to the wall, the OR 02 profile must not have holes in its lower part.

Pour la connexion du cadre à 45° au mur, le profilé OR 02 ne doit pas avoir de trous dans la partie inférieure.

MONTAGEM DAS COLUNAS

COLUMNS ASSEMBLY

ASSEMBLAGE DE LA COLONNE

A fixação da coluna à Sapata simples e à Peça de fixação superior deve ser feita por aparafusamento. O parafuso fixará às peças nos furos roscados.

É possível, dada a natureza do material da Sapata simples e da Peça de fixação superior, as furações não estarem milimetricamente posicionadas no sítio correto sendo imprescindível fazer a verificação dos alinhamentos de forma a evitar desvios na montagem, bem como verificar as folgas entre as extremidades das peças face à coluna.

The column should be fixed to the Simple anchoring and to the Upper fixation part by screwing. The screw will fix to the parts in the threaded holes.

Due to the Simple anchoring and to the Upper fixation part materials, the holes may not be exactly positioned in the right place, so it is essential to verify the alignment in order to avoid deviations during assembly, as well as to verify the gaps between the ends of the pieces with respect to the column.

La fixation de la colonne à l'Ancrage Simple et à la Pièce de fixation supérieure doit être effectuée par vissage. La vis se fixe aux pièces dans les trous filetés.

En raison du matériau de l'Ancrage simple et de la Pièce de fixation supérieure, les trous peuvent ne pas être positionnés exactement au bon endroit. Il est donc essentiel de vérifier l'alignement afin d'éviter les déviations lors de l'assemblage, et de vérifier les écarts entre les extrémités des pièces par rapport à la colonne.

MONTAGEM DE AROS CONTÍGUOS ADJOINING FRAMES ASSEMBLY ASSEMBLAGE DES CADRES ADJACENTES

Na tipologia de aros contíguos, aplicar troços de perfil OR13 para ajustar a ligação entre os aros, os quais deverão ser fixos por aparafusamento. Analisar e adaptar sempre essa fixação para não impedir a aplicação dos restantes componentes que possam alterar em função da tipologia adotada em cada um dos lados de união da pérgola.

No fim, selar com fundo de junta e silicone a zona de união dos aros para uma melhor vedação.

In adjoining typologies of frames, apply sections of OR13 profile to adjust the connection between the frames, which must be fixed by screwing. Always analyse and adapt this fastening to ensure that it does not obstruct the application of the remaining components that may change according to the typology adopted on each of the pergola's joining sides.

Finally, seal the area where the frames are joined with a foam backer rod and silicone for a better seal.

Dans le cas de cadres adjacents, appliquer des sections de profilé OR13 pour ajuster la connexion entre les cadres, qui doivent être vissés. Il faut toujours analyser et adapter cette fixation afin de ne pas empêcher l'application des autres composants qui peuvent changer en fonction du type adopté sur chacun des côtés qui rejoignent la pergola.

Enfin, sceller la zone de jonction des cadres avec un fond de joint et du silicone pour une meilleure étanchéité.

Dependendo dos lados da união do aro, podemos ter ou não o perfil OR33 em ambos ou apenas num dos lados.

Depending on the sides of the frame joint, we may or may not have the OR33 profile on both or only one side.

En fonction des côtés du joint du cadre, nous pouvons avoir le profilé OR33 sur les deux côtés ou seulement sur un côté.

Pre-drill OR01 profile for 6.3 mm screws
Pré-percer le profilé OR01 pour des vis de 6,3 mm

MONTAGEM DE CALEIRAS CONTÍGUAS - APLICAÇÃO DAS PEÇAS DE UNIÃO DE CONTINUIDADE OR ADJOINING GUTTERS ASSEMBLY - UNION CONTINUITY PARTS APPLICATION ASSEMBLAGE DES GOUTTIÈRES ADJACENTES - APPLICATION DES PIÈCES DE UNION POUR CONTINUITÉ

Em tipologias com caleiras com comprimentos superiores a 6,50m, deve-se aplicar uma Peça união de continuidade na união das caleiras.

In typologies with gutters longer than 6.50m, a Union continuity part must be applied at the gutters joint.

Dans les typologies où la longueur des gouttières est supérieure à 6,50 m, une Pièce de union de continuité doit être appliquée au niveau du joint des gouttières.

Em todas as uniões, selar o orifício com silicone.

Seal the hole with silicone at all joints.

Pour tous les joints, sceller le trou avec du silicone.

Para unir caleiras com comprimento > 6.50m
Material: ABS | Acabamento: Preto

299943 PONTE P/ CABOS LED OR
LED CABLE HOLDER
SUPPORT DE CÂBLE LED

OR 05

Por fim aplicar as Pontes para os cabos LED na zona da caleira, colando-as. Estas pontes só são necessárias caso a solução preveja a aplicação das fitas LED's. O perfil OR 05 deverá estar pré-maquinado para as receber.

Finally apply the LED Cable holder in the gutter area by gluing them. These holders are only necessary if the solution includes the application of LED strips. The OR 05 profile must be pre-machined to receive them.

En fin de compte, appliquer les Supports de câbles LED dans la zone de la gouttière en les collant. Ces supports ne sont nécessaires que si la solution prévoit l'application de bandes de LED. Le profilé OR 05 doit être pré usiné pour les recevoir.
